

FIELD SERVICE ENGINEERS

One of the major considerations involved in the decision to purchase any engineering services is the quality and availability of the support.

EPS provides fully qualified field service engineers to the industry, specialising in turbine package systems support.

We work closely with established turbine core engine providers in delivering the complete scope of services of core engine and package systems support.

Our field service philosophy is proactive, involving preventive and predictive maintenance. The reliability of our field service is based on comprehensive knowledge of your installations and its service history.

Key field service areas are:

- Installation and Commissioning
- Scheduled package maintenance
- Unscheduled breakdown fault diagnosis
- Engine Mapping for General Electric LM DLE® Configured units.
- Control Systems Support for Rustronic® and Woodward Netcon 5000® installations.

On-site services are charged at an hourly rate, EPS will provide a quotation in advance detailing timescales and deliverables.

Should you wish to know more about the provision of EPS field services please contact:
